

Credit Suisse deploys FircoSoft Watch-list filtering solution

Paris, FRANCE – 7th September, 2006

Credit Suisse is implementing FircoSoft OFAC-Agent Suite solution, to eliminate the risk of processing illegal transactions. FircoSoft solution will be deployed worldwide, and the first roll-out will take place in 11 foreign sites in phase 1 of the project.

Credit Suisse will run Firco Messages Filter on T24™ from TEMENOS and other back-end systems. Ms. Beata Grycner, IT Project Manager, from Credit Suisse says “Credit Suisse sites are running on various environments, and we selected the FircoSoft solution as it has the great advantage of being available on every platform we required. Besides, their solution is easy to integrate into our various in-house local applications.”

Mr Frédéric Casadei, FircoSoft Sales Director says “our solutions are quick and simple to install; we were able to satisfy Credit Suisse expectations, as they were willing to deploy our solution themselves. We accompanied them in the test installation in Switzerland. Following this competence transfer phase, Credit Suisse is successfully pursuing their project roll-out”.

About FircoSoft

Founded in 1992, FircoSoft offers filtering solutions and payment/securities messages repair (STP) solutions to international financial institutions. FircoSoft develops, markets and supports OFAC-Agent Suite, a solution to eliminate the risk of processing illegal transactions and detect high-risk financial customers. Over 200 institutions worldwide use FircoSoft's Watch List Filtering solutions. Our solutions are multi-alphabet ready.

FircoSoft is a member of the SWORD Group (Euronext FR0004180578 - SWP).
